

# BIOL111N : Basic Human Anatomy and Physiology

An introductory course centering on the structure and function of the human body with a concentration on normal anatomy with emphasis on system functions and interrelations between systems. This course is for the beginning student. A series of laboratory experiences are included to provide practical support for concepts presented in lecture.

**Credits 4**

**Prerequisites**

BIOL105N or BIOL107N is recommended, but not required.
